

## WELCOME TO THE WORLD OF MAGNETIZER®

Thank you for your Magnetizer® purchase. Now you will enjoy a lifetime of savings and longer equipment life while contributing to a better environment.

### RV Conditioning System Installation

**RVAC-S | SKU: 4553**

Patents: US: US6662569 B2 • Japan: 2003-50786 & Other Countries

Install 4 small AC units with back plates on the small diameter liquid refrigerant line just before the inside air handling cabinet.

Just before the outside compressor enclosure on the larger line install 2 larger MO-A units.

In addition there are 4 AFE-S small units for the engine placement, next to the radiator - to be installed on the 2 high pressure lines out of the compressor returning to the condenser.

Each Magnetizer system comes with tie straps which are inserted through the holes in unit. Make a loop at one end of the unit... but do not tighten the strap completely. Place the unit around the pipe and loop the 2nd strap... then pull both straps to snug the unit to the pipe. Once installed the tail on the straps can be cut off.
